Date of birth: 16/03/2001 | **Nationality:** Indian | **Gender:** Female | **Phone number:** (+44) 7887121726 (Mobile) | **Email address:** yashaswinitv27@gmail.com |

Address: 79 station road , e7 0eu, E70eu, LONDON, United Kingdom (Home)

ABOUT ME

I am a highly motivated Data Science Master's student at Queen Mary University of London, with a strong foundation in analytical problem-solving, machine learning, and data visualization. With a passion for uncovering insights from complex datasets, I excel in developing innovative solutions and leveraging data-driven strategies to drive impactful decisions. As an international student, I bring a diverse perspective and adaptability, making me a valuable asset in collaborative and global environments.

EDUCATION AND TRAINING

09/2024 – CURRENT london, United Kingdom
BIG DATA SCIENCE queen mary university of london

2019 – 2023 Mysore
BACHELOR OF ENGINEERING mysore royal institute of technology

2017 – 2019 Mysore
PRE-UNIVERSITY COURSE mahesh pu college

2017 Mysore, India
SECONDARY SCHOOL LEAVING CERTIFICATE st mary's english high school

LANGUAGE SKILLS

Mother tongue(s): **KANNADA**

Other language(s): **ENGLISH**

SKILLS

python | sql | machine learning | data mining | big data | apache spark | rdd transformation | data frame

PUBLICATIONS

2023
Implementation Of Hybrid Power Generation System Using Arduino Controller

implementation Of Hybrid Power Generation System Using Arduino Controller – 2023
We require electricity for operating almost all the appliances we use in our day-to-day life. So, it has become an indispensable part of our life. Now there are two ways to produce electricity first by using non- renewable sources of energy and second by renewable sources of energy. With increase in population and advancement of technology, consumption of electricity is also increasing exponentially. Simultaneously, we have to increase the production of electricity also in order to meet the demands of growing population. The biggest disadvantage with the usage of conventional resources is that their usage causes pollution due to the production of various pollutants like ash in case of a coal power plant, smoke in case of diesel power plant, radioactive material in case of nuclear power plant. Maintaining these pollutants is not an easy task and it also requires a lot of money. So we have to find some other methods to produce electricity.

PROJECTS

05/2023

Detection Of Human Facial Expression Using Machine Learning

The facial expression recognition project will involve the usage of a deep learning model, convolutional neural networks. Facial Expression Recognition Technology is used for medical research in autism therapy and deepfake detection.

2022

Student Online Attendance Managment

The attendance management system is a tool that keeps track of employee and student attendance in institutes. It gives complete data about the time the students are present in the institute and the time they take off. This process can be conducted by recording student and employee hours using online attendance software for your company.

Tower Of Hanoi

The puzzle begins with the disks stacked on one rod in order of decreasing size, the smallest at the top, thus approximating a conical shape. The objective of the puzzle is to move the entire stack to the last rod.

PATENT

03/2023

IOT BASED AGRI ROBOTIC HANDS FOR PLUCKING UNDER GROUND CROPS & AUTOMATIC SPRAYING

This project involves an **IoT-based agricultural robot** designed to **pluck underground crops** like potatoes and carrots using robotic arms and to perform **automatic spraying** of fertilizers or pesticides. The system uses **sensors** to detect soil and crop conditions, and is **remotely controlled** via a mobile app or web interface. It reduces manual labor, improves precision, and supports smart farming practices.

03/2025

Machine learning based customer Feedback processing device

The "Machine Learning-Based Customer Feedback Processing Device" is an innovative kiosk-style system designed to collect, process, and analyze customer feedback using machine learning algorithms. It features an intuitive touch-based interface, built-in input/output ports, and a feedback management module capable of identifying sentiment, trends, and actionable insights from customer responses. The uniqueness lies in the structural design and ergonomic layout tailored for ease of use in public spaces such as malls, hospitals, and customer service centers. This device is registered for its novel shape and configuration, enhancing both functionality and user experience.

INTERN

02/2023

internship

I Have Completed my internship on basics of Artificial Intelligence and Robotics, Artificial intelligence is a discipline that focuses on enabling machines to develop the same intellectual capabilities as humans. Robotics, on the other hand, is the science of designing and building physical robots to improve automation and innovation.

WORK EXPERIENCE

EARLY-STAGE TECHNOLOGY START-UP, BANGALORE, KARNATAKA, – YASHASWINI T V – 07/07/2023 – 03/07/2024 – BANGLORE KARNATAKA, INDIA

Worked in a fast-paced start-up environment focused on data-driven business solutions. Responsible for cleaning and analysing structured and unstructured datasets using Python and SQL. Developed interactive dashboards and automated reports to support strategic decision-making. Built predictive models to identify customer trends and improve operational efficiency. Collaborated with cross-functional teams including product and engineering to translate business requirements into scalable analytical solutions.

DEMONSTRATOR– BIG DATA PROCESSING (PART-TIME) – YASHASWINI TALAKADU VIJAYKUAMR – 16/01/2025 – 31/12/2025 – LONDON, UNITED KINGDOM

Worked part-time as a Demonstrator for the Big Data Processing module, supporting postgraduate laboratory sessions in distributed data systems and large-scale analytics. Assisted students in implementing data processing pipelines using Python and Apache Spark, and guided them in applying machine learning techniques to real-world datasets. Provided academic support during practical sessions, clarified complex technical concepts, and offered feedback on coursework and project work.

This role strengthened my expertise in scalable data architectures while developing my mentoring, communication, and collaborative skills within a research-led academic environment.
